

3D SNAP FOCUS AREA

What is the focus area?

3D Snap Tension Fabric Panels give you the opportunity to present your company's branding in a *unique, custom* display. The stretching and tension of the fabric add movement and depth.

However, your company's graphics are best presented if captured **within the "Focus Area"**—the area of the fabric that receives the least tension.

The fabric outside the Focus Area will stretch the most and distort your branding. Additionally, the fabric hemming and button holes are outside the Focus Area.

As illustrated below, the Focus Area is 1.125" in from the edge of all four sides of the fabric. The entire square is printed, however, only the Focus Area is completely free of distortion, sew lines and button holes.
